Human Anatomy and Diseases, Pt. 2 Notebook

What four main parts is your skeletal system made of, and how many bones does it include?

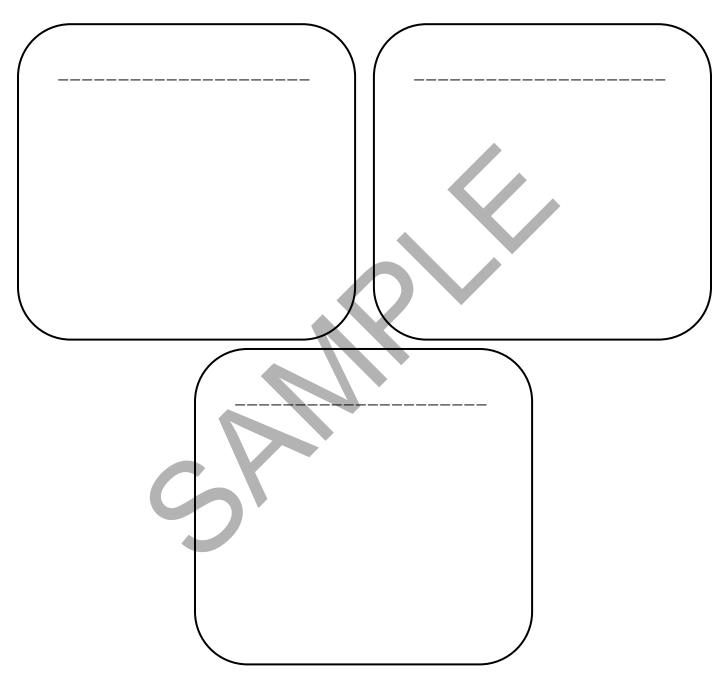

Illustrate and label the five parts of a bone that you learned about on page 3 and summarize what you learned about each one.

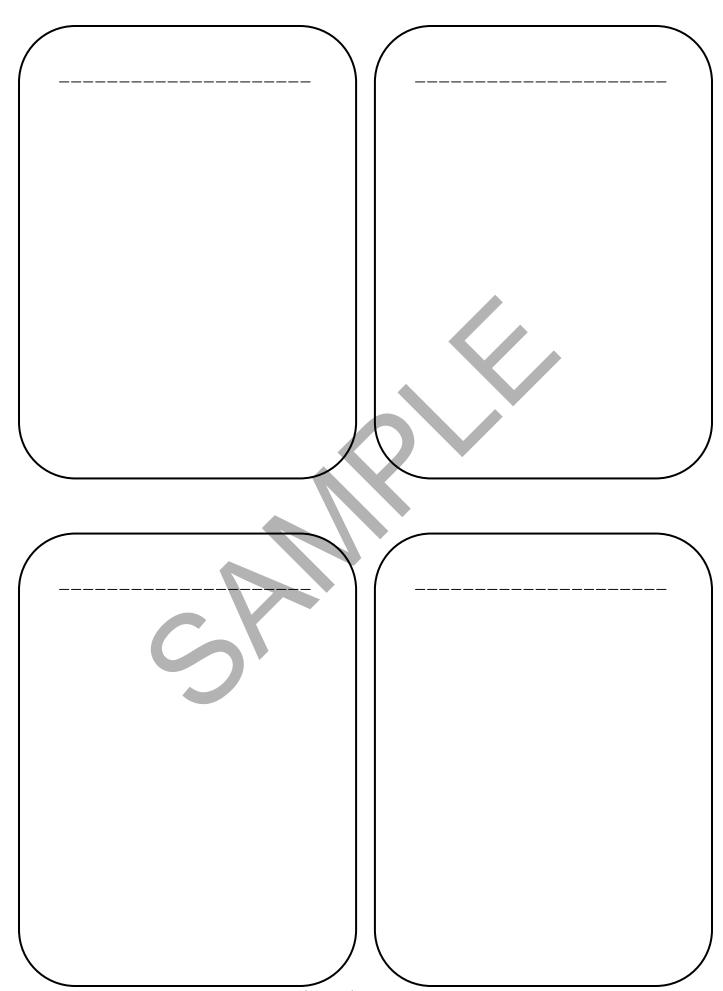

Compact Bone	Spongy Bone
Cartilage	Red Bone Marrow
Yellov	w Bone Marrow

What is collagen?	

Illustrate and label three types of cells in the bones and summarize what you learned about each one.

Illustrate and label the five types of bones in the body. Summarize what you learned about each one and give as many examples as you can of where you can find these types of bones in the body. (You do not need to provide an example of an irregular bone.)

How many cranial bones does a person have?	
How many bones does a person's face have?	
What is the only bone in the skull that can move?	
What is the name of the cheekbone?	
Illustrate and label the cranial bones and facial bones shown on page 5.	_

How many vertebrae does the backbone have?	
How many cervical vertebrae does a person have? How many thoracic vertebrae does a person have?	
Illustrate and label a cervical and a thoracic vertebra.	
How many major bones are in each arm?	
Illustrate and label the bones of the arm.	

What is the actual name of the part of the leg between the knee and hip? What is the name of the bone?
What are the two bones in the leg?
What is the longest bone in the body?
What is another name for the tibia?
Illustrate and label the bones of the leg and thigh.
What gives us the ability to do very precise work?
How many bones are in each hand?

On the next page, list the three main sections you can divide the bones of the hand into and what part of the hand each section includes.
