

Cockatoo

A cockatoo is a type of parrot found in Australia, New Guinea, Indonesia, the Philippines, and the Solomon Islands. Many are white, with a little yellow or red in their plumage. Some are all black. Cockatoos range in size from about 12 to 26 inches (30 to 65 cm) tall. A cockatoo has a large, strong beak that it uses for cracking nuts, digging up roots, or getting grubs from wood. It also eats seeds and berries. Flocks of cockatoos can include dozens to thousands of birds. Cockatoos are very inventive. Some have been known to break a stick to the right size, and by holding the stick in one foot, bang on a hollow part of a tree it nests in to make a drumming sound.

Follow these instructions to draw a cockatoo on the next page like the one shown below:

- Decide if you want to draw the right half of the picture or the left half of the picture and draw it in one of the first two grids. You can draw both if you'd like.
- Now, using a blank grid from the back of the book, try drawing the whole picture.

Questions

1. Which picture shows a Gouldian finch? Circle it.

2. Which picture shows a roseate spoonbill? Circle it.

3. Which picture shows a southern carmine bee-eater? Circle it.

4. Which picture shows a scarlet ibis? Circle it.

5. Which picture shows a pheasant? Circle it.
