

Angel Shark

Angel sharks look very much like rays because of their flattened heads and bodies. Some of their fins look like wings. They are smaller sharks, only reaching up to 6.25 feet (2.5 meters) long. Angel sharks are found around the world in tropical and warm waters. Because some types were accidentally caught in fishermen's nets for years, they are in danger of becoming extinct. They do not usually attack people unless they are threatened.

Follow these instructions to draw an angel shark on the next page like the one shown below:

- Decide if you want to draw the right half of the picture or the left half of the picture and draw it in one of the first two grids. You can draw both if you'd like.
- Now, using a blank grid from the back of the book, try drawing the whole picture.

Questions

1. Which picture shows a tiger shark? Circle it.

2. Which picture shows an angel shark? Circle it.

3. Which picture shows a leopard shark? Circle it.

4. Which picture shows a nurse shark? Circle it.

5. Which picture shows a bull shark? Circle it.
