

While in college, he
watched as Sputnik,
the first artificial
satellite launched
into Earth's orbit,
flew overhead.

In 1970, he
got to send
a telescope
into space
on an
unmanned
rocket, . . .

He got to send
an invention to
the moon! It was
called the . . .

His Ultraviolet
Camera

Spectrograph, which
was related to his
work on telescopes.
